

SITANSU DAS

DevOps Engineer | CI/CD & Automation | Cloud Infrastructure | Container Orchestration | IaC
Bangalore, Karnataka, India | +91-8144462616 | sitansudas52@gmail.com | GitHub: github.com/sitansudas | LinkedIn: linkedin.com/in/sitansu-das-6003a0312

PROFESSIONAL SUMMARY

Self-driven DevOps Engineer with hands-on, project-based experience across CI/CD pipeline automation, container orchestration, Infrastructure as Code, and GitOps workflows using Docker, Kubernetes, Terraform, Ansible, Jenkins, and ArgoCD. Working knowledge of AWS (EC2, S3, IAM) and Python/Bash scripting for building internal tools, REST APIs, and automation, with strong Linux, Git/GitHub, and Agile (Jira, Slack) fundamentals. Seeking to bring an automation-first mindset to a product engineering team.

TECHNICAL SKILLS

Containerization & Orchestration: Docker, Kubernetes (K8s), Helm Charts

Infrastructure as Code (IaC): Terraform, Ansible

CI/CD & GitOps: Jenkins, GitHub Actions, ArgoCD, GitOps Workflows

Cloud Platforms: AWS (EC2, S3, IAM)

API Development: Python, FastAPI, REST APIs, Boto3 (AWS SDK), psutil

Scripting & Automation: Python, Bash/Shell Scripting, YAML, Cron

Version Control: Git, GitHub (Branching, Pull Requests, Code Review)

Operating Systems: Linux/Unix (CLI), Windows

Collaboration & Agile Tools: Jira, Slack

Additional: MongoDB, SQL, HTML, CSS, Networking Fundamentals (TCP/IP, DNS, HTTP)

PROJECTS

CI/CD Pipeline with Jenkins, Docker and ArgoCD (GitOps)

2025

Tools: Jenkins, Docker, Kubernetes, ArgoCD, Git, GitHub, YAML, Linux

- Built an end-to-end CI/CD pipeline in Jenkins to automate code build, Docker image creation, and image push to Docker Hub on every GitHub commit
- Deployed the application to a Kubernetes cluster using ArgoCD (GitOps), syncing live cluster state with the Git repository
- Authored Kubernetes manifests (Deployment, Service, ConfigMap) in YAML and managed application rollouts and rollbacks using kubectl

Infrastructure Automation with Terraform and Ansible

2024

Tools: Terraform, Ansible, AWS (EC2, S3, IAM), Bash, YAML, Linux

- Provisioned AWS infrastructure (EC2 instances, S3 buckets, IAM roles) using Terraform, managing remote state via an S3 backend for consistent, repeatable deployments
- Wrote Ansible playbooks to automate post-provisioning configuration — installing packages, configuring services, and managing users across multiple Linux hosts
- Combined Terraform and Ansible into a single provisioning-to-configuration workflow, minimizing manual intervention across the infrastructure lifecycle

Internal DevOps Utilities API — System Health & AWS S3 Monitoring

2025

Tools: Python, FastAPI, Boto3, psutil, Uvicorn, REST API, AWS S3, Linux

Repo: github.com/sitansudas/python-mini-project-sitansu

- Designed a modular REST API with FastAPI (router/service-layer architecture) with interactive Swagger/ReDoc documentation, to centralize internal DevOps utilities for health monitoring and AWS visibility
- Built a system health-check endpoint using psutil to report live CPU, memory, and disk utilization with configurable threshold-based status classification
- Built an AWS S3 endpoint using Boto3 to inventory buckets and classify them by age against a 90-day threshold, supporting storage lifecycle and cleanup decisions

EDUCATION

Bachelor of Science (B.Sc.) in Computer Science

Stewart Science Degree College, Utkal University, Odisha | 2022 – 2025 | CGPA: 8.5

Higher Secondary Certificate (Plus 2) — Science Stream: SAIHSR, Cuttack, Odisha | Passed: 2022 | 74.16%
